

Questions:

- What was the most challenging piece of this assignment? Did you find it easy or challenging to work with HTML and CSS? How long did this overall assignment take you?
 - What decisions did you make when you made your site mobile friendly?
 - What did you take into account when you developed the *design* of your website? Is there anything that you're particularly proud of?
 - Given more time or resources, what additional features would you add to your site in the future?
 - How many hours did you spend on this assignment?
 - (Optional) If you made any assumptions about this assignment, what are they
1. The most challenging part of the this assignment for me is to figure out the layout of the page and what components go into each section. For working with CSS and Html is rather intuitive, or at least, manageable for me. Although I had to frequently consult wikis and documentations, I mainly aimed to solve syntactical issues instead of designing issues. In addition, using browser to debugging is somewhat more direct than debugging java code via console details. I have finished this project in roughly a week, where I have devoted roughly 6-7 hours on it. I progress incrementally by sections, like generic css, shared html codes, css for each page, and specific html codes for each page.
 2. When making the mobile-friendly version of the website, I take advantage of the my implementation of the grid and simply rearranged some of the grid sections and their rules for sizing and spacing. To design the overall structure of the webpage with a mobile-friendly awareness have saved a lot of time for me.
 3. I design the website with a mobile design mindset, so that I do not need to make drastic changes to the website for computer user as well as for mobile users. I think my approach to the navigation bar is efficient that I do not need to wholly re-design it for mobile compatibility.

4. I would definitely add into a drop-down navigation bar for the mobile version of the website. In addition, I think I can figure out a way to embed pdfs and videos into my webpage. Moreover, if I were to finish my Yijing divination projects, I can even embed a web application into my website. Moreover, I would think more about the color palette I would use and probably add more animated components.
5. Total of 6-7 hours.
6. I made the assumption that the website is semi-formal that showcase my professional experiences and personal life. If I were to make a more professional kind of website that is used for job searching, I would probably add more detail about my tech stack, work experiences, and soft skills etc.
